

Final design justifications

Friday, 19 May 2023 6:56 PM

During the interview with the client, they gave the following feedback:

- The main window for design 1 had too many buttons
- There needs to be a control to allow the selection of different question types when creating a question
- There needs to be a label to clarify what the study button does

Hence, the following changes were applied to the final design:

- A control bar instead of buttons were used to house many of the functionalities of the program, making the UI cleaner and more readable
- A label stating "begin study session" was added above the study button to better clarify its purpose
- In the question add/modify window, a drop down box which holds the question types was added

Other changes include:

- The final design opts for a list box to display the questions added due to ease of readability
- A search window was added with elements allowing the user to search using an inputted term, search by tag, and display the results in a list box
- The add/modify window is mostly similar to the first design but with the addition of the question type drop down box due to it being more convenient to be able to see all fields at once
- An add tag window was added which allows the user to add a new tag to the system
