Mock up

Variable name	Data type	Size	Scope	Description
PIN	Integer	1	Global	The user's PIN is stored within this variable and it is checked when the user attempts to log in to ensure it is correct.
SelectedQuestion	String	1	Global	The question selected using the list box is stored here so that it can be displayed using a label.
score	Integer	1	Global	Stores the number of times a question was answered incorrectly.
InputAns	String	1	Global	Stores what the user inputs as their answer during the study session so that it can be compared to the stored answer.
tag	String	1	Global	Holds the tag selected.
question	String	1	Global	Holds the string to be added to a question that will be saved.
ans	String	1	Global	Stores the string for the answer that will be added to the saved question.
name	String	1	Global	Holds the name that will be added to the question being added/saved.
InputPIN	Integer	1	Global	Holds the PIN inputted in the login screen so that it can be compared to the PIN stored.
DisplayQuestion	String	1	Global	The question is retrieved from the file and assigned to this variable.

Object	Object type	Type	Variable handled	Properties	Description
Form	frmPIN	Event - load	N/A	Colour = control	This is the screen used that prompts the user to input their PIN before they can use the rest of the program.
Form	frmMain	Event - load	N/A	Colour = control	This screen appears after the user has successfully inputted their PIN, housing many of the functions of the program, including viewing questions added.
Form	frmStudy	Event - load	N/A	1	After clicking the study button this form will appear. This is where the user will complete their study regime.
Form	frmEdit	Event - load	N/A	Colour = control	It is on this screen where the user can add and edit questions saved by the program.
Button	btnPIN	Event - load	N/A	Arial 10 pt "Enter"	Indicates code to check if PIN matches the set one.
Button	btnClose	Event - load	N/A	Arial 10 pt "Close"	Closes the PIN screen.
Textbox	txtPIN	Method	InputPIN	=""	The user inputs the PIN into the textbox here.
List box	lstQuestions	Method	SelectQuestion	Arial 10 pt = Read only = true	Allows the user to select from the questions they have added to the program.
Button	btnAdd	Event - click	N/A	Arial 10 pt "Add"	Opens up frmEdit.
Button	btnAddTag	Event - click	N/A	Arial 10 pt "Add tag"	Opens up a window to add a new tag to the database.
Button	btnDelete	Event - click	N/A	Arial 10 pt "Delete"	Deletes the selected question.
Button	btnSort	Event - click	N/A	Arial 10 pt "Delete"	Sorts the list of questions.
Button	btnSave	Event - click	N/A	Arial 10 pt "Save"	Saves the questions.
Button	btnExport	Event - click	N/A	Arial 10 pt "Export"	Exports the questions into a text format in a text file.
Button	btnStudy	Event - click	N/A	Arial 10 pt "Study"	Opens up frmStudy.
Button	btnExit	Event - click	N/A	Arial 10 pt "Exit"	Closes the program.
Label	lblQuestion	Method	SelectQuestion	Arial 12 pt "Question selected."	Displays the selected question.
Label	lblScore	Method	score	Arial 12 pt "Times incorrect:"	Displays the score of the selected question.
Textbox	txtAnswer	Method	InputAns	=""	The user types in the answer to the question in this textbox.
Button	btnSubmit	Event - click	N/A	Arial 10 pt "Submit"	Submits the answer and then displays the stored answer for the user to compare.
Dropdown menu	drpTag	Method	tag	Arial 10 pt = Read only = true	Allows the user to select from previously added tags.
Button	btnSaveQuestion	Event - click	N/A	Arial 10 pt "Save"	Saves the question that was being edited in frmEdit.
Textbox	txtQuestion	Method	question	=""	The user inputs what will be stored as the question.
Textbox	txtAnswering	Method	ans	=""	The user inputs what will be stored as the answer to the question.
Textbox	txtName	Method	name	=""	The user inputs what will be saved as the name of the question they are editing.
Label	lblTag	N/A	N/A	Arial 10 pt "Tag"	Clarifies what the drop down box below it holds.

Pseudocode

```
PIN check
START
  InputPIN <- txtPIN.Text
  IF InputPIN = PIN THEN
    Open frmMAIN
  ELSE
    MessageBox("Incorrect PIN, please try again.")
  ENDIF
END

Question selected label
START
  SelectedQuestion <- lstQuestions.index
  Read Question file
  DisplayQuestion <- Find question with corresponding index
  lblQuestion.Text <- "Question Selected - " & DisplayQuestion
END

Answer check
START
  ans <- txtAnswer.Text
  lblQuestion.Text <- Random(DisplayQuestion)
  MessageBox(Question + ans)
  IF YesNo("Was the answer incorrect?") = Yes THEN
    Score += 1
  ENDIF
END

Adding question (when btnSaveQuestion clicked)
START
  Question <- txtQuestion.Text
  Answer <- txtAnswer.Text
  Name <- txtName.Text
  Tag <- drpTag.selected
  Write to file
  Close frmEdit
END

Searching (binary search)
START
  binarySearch(questions, search term, low, high)
  repeat till low = high
    mid = (low + high)/2
    if (x = arr[mid])
      return mid
    else if (x > arr[mid])
      low = mid + 1
    else
      high = mid - 1
    End loop
  END

Sort (quick sort)
START
  quickSort(arr[], low, high)
  if (low < high) THEN
    pi = partition(arr, low, high)
    quickSort(arr, low, pi - 1)
    quickSort(arr, pi + 1, high)
  End if
END

Export
START
  array <- Read question file to end
  For each question in array
    WriteToFile(array)
    NewLine
    WriteToFile("Answer: ")
    NewLine
  Loop
END
```
